

CABINET SAVERS

Renew Your Kitchen

What is refacing?

Refacing kitchen cabinets involves removing all of the old drawer fronts and kitchen cabinet doors and replacing them with new cabinet fronts.

If you're looking for a completely different style in your kitchen, or if your old cabinets show significant signs of wear, refacing will provide your kitchen with a facelift.

Why should I reface my kitchen cabinets instead of replacing them?

If you like the current layout of your kitchen or just prefer to avoid the cost and inconvenience of remodeling, cabinet refacing offers the perfect solution. You also keep your existing cabinet frames intact and get back to cooking in your own kitchen a lot sooner by refacing cabinets rather than replacing them.
